

# Extract IPKG Package

- Get an IPKG package from elsewhere (for example [http://www.fonera.be/rep/FON2202/kmod-usb-serial-ftdi\\_2.6.26.2-fonera-1\\_mips.ipk](http://www.fonera.be/rep/FON2202/kmod-usb-serial-ftdi_2.6.26.2-fonera-1_mips.ipk)) and put it in a directory of your choice
- Untar it with :

```
tar -xvzf kmod-usb-serial-ftdi_2.6.26.2-fonera2-1_mips.ipk
```

- Now we have some of files created (control.tar.gz, data.tar.gz and some others).
- Do nothing with control.tar.gz
- UnGZIP data.tar.gz :

```
tar -xvzf data.tar.gz
```

- Now you have successfully extracted your IPKG Package!
